

A collection of devices displaying the ClearDeck app interface. In the background, a large monitor shows a desktop view with an inbox, folders, and a meeting reminder. In the foreground, there is a laptop on the left, a smartphone in the center, and two tablets on the right, all showing the app's interface adapted to their respective screen sizes.

ClearDeck

A cross platform, secure data container solution for greater productivity

clear | deck

- ✓ A cloud service with an unprecedented level of security built into the architecture
- ✓ With innovative productivity and usability features
- ✓ Providing easy operation and configuration
- ✓ Supporting David Allen's Getting Things Done® methodology
- ✓ Also working when the device is temporarily offline

“ClearDeck - Work securely and productively with Office 365 emails and other data, on all devices.”

ClearDeck is a **productivity app** and cloud service that **secures corporate data** both on **mobile devices, Windows and Mac OS**, and is easy to manage. It protects your data inside a secure container, ensuring the data cannot be leaked to private apps or accessed without proper authorization. The configuration and operation is easy, not requiring the devices to be under MDM control. ClearDeck supports personal productivity with Office 365 and Box, through an innovative, integrated mail, file and todo management system.

Security

- ➔ The ClearDeck app is always protected by password/ fingerprint
- ➔ The corporate data within the ClearDeck app is protected by an extra layer of encryption
- ➔ ClearDeck app does not allow opening of corporate data in other apps, or the copy/paste of data outside the app
- ➔ ClearDeck ensures that TLS connections with forward secrecy and 256 bit AES encryption are always used for communicating with Office 365
- ➔ ClearDeck blocks access from jailbroken iOS devices and rooted Android devices
- ➔ ClearDeck offers the possibility to remotely wipe the company data in the ClearDeck app
- ➔ The ClearDeck servers use containers to completely isolate your company's data from the data of other companies

User productivity with mails, files and todos

ClearDeck users get overview, automation, integration and support for personal productivity – all in one app, on all platforms. Create todos from mails, and vice versa, without need to use copy/paste operations.

ClearDeck provides a clear overview with an easy to use dashboard summarizing the whole work situation and provides automatic recognition of the relevance of incoming communication for existing tasks across all platform on mobile and desktop devices.

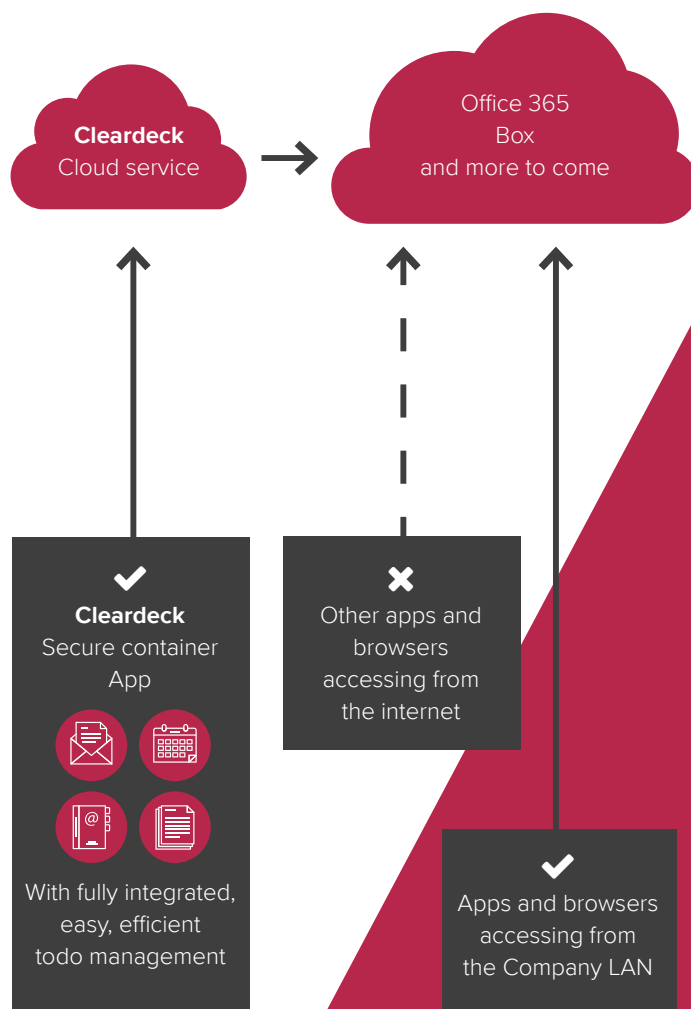

- Consolidated inbox and archive folders
- Easy creation and execution of todos
- You can organise your todos, both on todo lists and in projects
- You can keep track of the mails and other things you are waiting for, from colleagues and others
- Great support for the David Allen's Getting Things Done® productivity methodology

Easy configuration, management and low maintenance

With ClearDeck there is no need for businesses to install, configure and manage any servers. ClearDeck is a single, integrated solution with apps connecting to an easy-to-use cloud service. ClearDeck does not depend on “wrapping technology” which may fail at the next update of the device OS.

Get started with ClearDeck easily

- Sign up on the ClearDeck website and receive a one-time code which, when activated, will configure your ClearDeck app
- As ClearDeck administrator, you can configure which of your Office 365 users should be allowed to use ClearDeck
- Users and the IT administrator can remotely wipe business data from a ClearDeck app which does not delete any other (personal) data on the device.
